

201 Stainless Steel Strip

Ningbo Qihong Stainless Steel Co., Ltd. specializes in the production and operation of precision stainless steel Strip. It has good cooperative relations with many famous steel mills in China. The material quality, delivery cycle and service have won unanimous praise from customers. The team has excellent professional knowledge, especially be good at providing a full range of solutions according to material characteristics for choosing the most matching stainless steel material.

The national standard grade of 201 stainless steel is 1Cr17Mn6Ni5N, which belongs to chromium-nickel-manganese austenitic stainless steel, with strong hardness, poor corrosion and low magnetic properties. The density of the international standard 201 stainless steel strip is generally considered to be 7.93g/cm³.

Compared with 304 stainless steel products, the price of 201 stainless steel strip is still relatively low, but because China's 201 steel grades mostly use enterprise standards, the nickel content of each manufacturer's products varies. The rolling mill can only achieve a width of 450, and only a few precision rolling mills are producing wider precision 201 stainless steel strips. Because the chemical composition of the materials produced by each steel mill is different, and the rolling equipment, technical level, and quality control of the cold rolling mill are very different, the 201 stainless steel strips sold in the market can be described as a mixed bag, the market price is very different, and the materials of the same thickness are different. The price difference of manufacturers is even 10,000 yuan / ton, so users must pay attention to the characteristics of material certificate and material surface quality when purchasing.

Product Parameter (Specification)

Material	304 316 301 310 430 201 400 420 421
Surface	NO.1, NO.4, 2D, 2B, BA, 6K, 8K, Mirror, etc
Thickness	0.02mm-4.0mm/Customized
Length	200-3500 mm or customized
Width	2-1500 mm or customized
Standard	ASTM, JIS, GB, AISI, DIN, BS, EN
Certifications	SGS ISO9001
Packing	Industry standard packaging or according to client's requirement
Brand	TISCO, POSCO, BAO STEEL, TSINGSHAN, QIYI STEEL etc .
Payment terms	L/C, T/T
Delivery time	Up to order quantity, contact us to know

Product Feature And Application

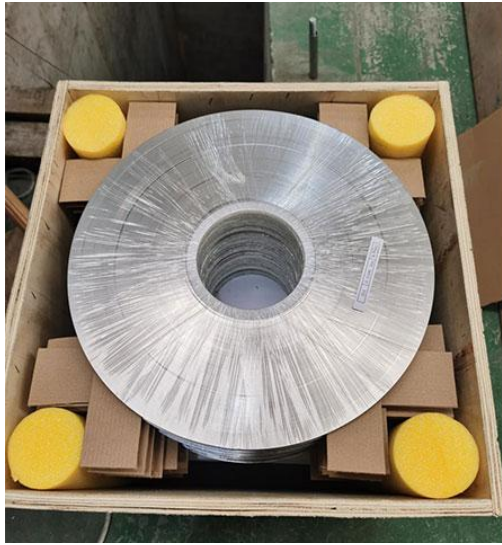

Due to the high Mn content in the 201 material, the 201 stainless steel belt is a non-food grade stainless steel. At present, it is mainly used for general purposes in dry environments such as lighting equipment, telecommunication poles, and automobile frames. 201 stainless steel plate ..polishing, no pinholes, etc. It is a high-quality material for the production of various watch cases and strap bottom covers. Shallow stretched products.
